

Edward A. Bayer
Department of Biomolecular Sciences
The Weizmann Institute of Science
Rehovot 76100 Israel

Biographical Sketch

Ed Bayer is a professor in the Department of Biomolecular Sciences at the Weizmann Institute of Science, Rehovot, Israel, adjunct professor at Ben-Gurion University in Beersheva, Israel, and guest professor at the Beijing University of Chemical Technology in China. His early work focused on the initial development of the avidin- and streptavidin-biotin system as a general tool in the biological sciences, and he received the Sarstedt Award (1990) for his contributions in this field. He is co-discoverer of the cellulosome concept and has pioneered the development of designer cellulosomes for research and biotechnological applications. In 1999, he founded and chaired an ongoing Gordon Research Conference on this subject, which recently celebrated 20 years since its commencement. He is the recipient of The Ullitzky Prize (2006) from The Israel Society for Microbiology on his work in this area and has served for a decade on the scientific advisory board of the US DOE BioEnergy Science Center (BESC). He has authored over 450 articles and reviews in both fields. He co-edited *Methods in Enzymology* Volume 184 on "Avidin-biotin technology", is editor-in-chief of the review journal *Biotechnology Advances*, section editor on Bacterial Genetics and Metabolic Engineering of *Biotechnology for Biofuels*, and serves on the editorial board of several other biotechnology- and microbiology-oriented journals, including *Environmental Microbiology* and *Current Opinion in Biotechnology*. He is an elected Fellow of both the American (2002) and the European (2013) Academies of Microbiology.
